

# Printex Machines & Supplies

Wagner Engraving offers the complete Printex line of pad printing machines and supplies

Four Color Model COS 100/4

One Color Transverse Cup

Designed to print flat or three-dimensional objects (of either smooth, rough or textured surfaces) with from one to four colors.

### Visprox® Inks

**Series TCP9900** prints on polyolefins, paper, polyamides, polyacetals, polyesters, phenolic, PET, polyurethanes, glass, chrome, metals, cellulose, ceramics, thermosets, lacquered surfaces, more.

**Series V2000** prints on flexible and rigid PVC, styrenes, ABS, SAN, Acrylic, polycarbonate.

### Printing Pads

Silicone rubber printing pads are cost-effective while providing long working life and high tear strength. Every print job has an optimum pad size, shape and hardness (durometer).

We offer over 120 standard pads. In addition to stock shapes, custom pads can be manufactured for your special application.

### A Total Approach To Pad Printing

Printex equipment reflects a "building block" approach; many units are user-convertible from open-inking to sealed-inking; and from single color to multi color operation. The most sophisticated systems retain the operating principles of the simplest, entry-level models.

When you purchase Printex equipment, our goal is to provide a proven turnkey package which puts you on the fast track to full productivity.

### Total Control

The digital controller interface is a membrane panel incorporating an LCD display and symbolic keypad that's logically organized for quick learning. Machine movements, parameter settings and operating modes are accessible with the touch of a button and changed with "+/-" keys.

The controller can also act as a PLC (with up to 5000 lines of C-language code) to control other peripheral devices.

### Visprox® Printing Inks

We sell the Visprox V2000 and TCP9900 series inks that have greater opacity, excellent printability and adhesion to a wide range of substrates. The Visprox ColorMatic system creates the entire PMS coated series colors.

### Silicone Rubber Printing Pads

We offer over 120 standard printing pads in a variety of durometers (hardnesses), and can develop custom pads for special applications.

### Printer Supplies and Accessories

We carry a wide assortment of doctor blades, ceramic ink cup seal rings, spare ink cups and machine parts for quick shipment.

### Image Plates and Plate-Making Supplies

We offer different types of processed photo polymer plates (short-run printing), and thin and thick steel plates (high-volume work). We also sell everything needed to process photo polymer image plates, including our UVAC-600 plate exposure unit.
